Solana Mainnet

INTRODUCING

Shadow Pay

Private payment links on Solana.
No wallet exposed. No trace.

Powered by Stealth Addresses

shadowpay.replit.app

THE PROBLEM

Every payment leaks your identity

Without ShadowPay

- ✗ Sender must know your wallet address
- ✗ Address revealed on-chain to all observers
- ✗ Transaction history permanently linked to you
- ✗ Gift card recipients expose their real wallet

Zero on-chain privacy

With ShadowPay

- ✓ Share a link — no address needed
- ✓ Claim to a one-time stealth address
- ✓ On-chain shows only random addresses
- ✓ Sweep privately to your real wallet

Link-level + stealth address privacy

HOW IT WORKS

Three steps to total privacy

01

Generate Link

Connect your wallet, enter an amount, and generate a shareable link. A secret key is created in your browser only — never sent to any server.

Sender funds escrow on-chain

→

02

Share the Link

The URL fragment (#secret) never leaves the browser. Share via DM, email, or any channel. The recipient needs only the link — no wallet address required.

No address in the URL

→

03

Claim Privately

Recipient opens the link. Funds claim to a derived stealth address — no wallet connection needed. Then sweep privately to any destination.

Wallet identity never revealed

UNDER THE HOOD

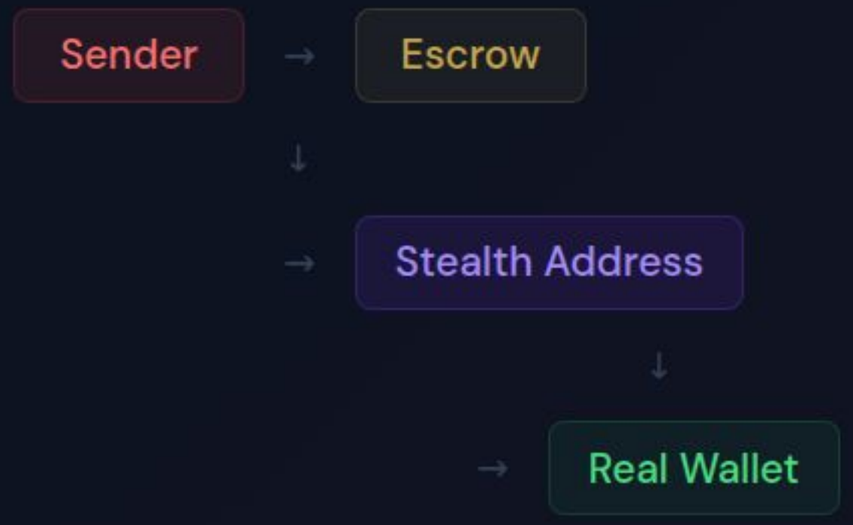
Stealth Address Technology

A 32-byte secret is generated in the sender's browser and embedded in the link fragment. It never touches any server.

The recipient's browser derives a one-time keypair using SHA-256 of the secret and link ID — deterministic, cryptographically sound, and completely private.

Built on Solana ed25519 — no extra protocol

ON-CHAIN TRAIL



Observer sees: escrow to random address. The link between escrow and real wallet is never visible.

USE CASES

Built for two core flows

Payment Links

Request or send exact amounts in SOL or USDC. The payer never learns the recipient's permanent wallet address — just clicks a link and pays.

- → Freelance invoicing
- → Splitting expenses privately
- → Tipping creators or builders

Private Gift Cards

Send SOL as a gift via link. The recipient claims to a stealth address — their real wallet is never revealed to the sender or anyone watching the blockchain.

- → Birthday and holiday gifts
- → Anonymous donations
- → Airdrop to holders privately

WHY SOLANA

The only chain fast enough for this

400

ms block time

Claim and sweep confirmed in under 2 seconds

$0.001

per transaction

Priority fee included. Cheaper than a text message.

SOL + USDC

non-custodial

Funds go directly on-chain. No custody. Your keys.

Mainnet — all transactions are real and final

SHADOWPAY

Pay in Shadow.

Stealth address payments on Solana Mainnet. Link-level privacy, real on-chain transactions, non-custodial.
